If you are using a Mac or a Linux machine to connect to ece-000, here is a nice simple way to allow ssh to automatically log you in to a remote host. If you have ssh installed and in your path, use these commands:

- ssh-keygen (press enter ~4x times to use default parameters)
- ssh-copy-id <username>@hostname
- for example: [picone@neuronix.nedcdata.org](mailto:picone@neuronix.nedcdata.org)
- ssh-add

Without ssh-add, sometimes the keys don't work and you are still prompted for a password. Ssh-add fixes that.

The information required to make this work resides in a directory:

~/.ssh

There is a file known\_hosts that tells you for which machines you have keys set up. Looking through your .ssh directory on each host will teach you a little about how this technology works.
