After a few days of class, I am still getting a lot of questions about things that are very clearly explained in the syllabus, or in the instructions for each assignment.

Please read these documents very careful. Everything you need to know is in these documents. While we don't mind answering questions, it doesn't reflect well on you when you ask a question about something that is in these documents.

Learning to be a good programmer involves being able to read documents carefully and understand all the details. Written documents, whether they are web pages or Word documents, are how programmers communicate specifications for code.

The syllabus is quite detailed and has all the information you need to be successful in this course.
