You need to be familiar with Microsoft Excel. This is covered in your prerequisite coursework. Unfortunately, many students who enter this course don't know the basics of Excel. We will use Excel extensively to debug and test algorithms.

Make sure you are familiar with:

- the difference between absolute and relative references to cells
- multiple tabs
- the Goal Seek function
- pivot tables

is a very simple example of some of the basic Excel concepts you will be responsible for.

There are plenty of online tools, including LinkedIn courses, that will teach you the basics of Excel in an hour or less. Take advantage of them.
