I think we have sorted this out.

Most of my ECE 1111 class is on the new curriculum, which means you are on track by taking ECE 1111 and ENGR 2011 in the fall semester of your second year.

We will adjust the content of ENGR 2011 so that you learn Python as we go along. The labs will be Python based.

We will also adjust ECE 1111 so that we don't repeat the same Python material towards the end of the course. We usually cover Python in the last one-third of the course.

For now, just make sure you activate your account on ece-000. We will use this from the first day of both courses.

Labs will meet in the first week, so you will be expected to be able to log into the server.

We have a large percentage of students in ECE 1111 also enrolled in ENGR 2011. This is going to be a bit of a challenge, but we will make it work.

In 2011, we will use Linux and Python, since one of the goals of the course is to reinforce what you have learned in ECE 1111. That means some of you will be playing catch up.

For the moment, there is one small thing I will need you to do.

After you log in, if you are working on ECE 1111, you will need to type the following command:

```
newgrp ece_1111
```

Similarly, if you are working on ENGR 2011, you will have to type:

```
newgrp engr_2011
```

This will give you the correct set of permissions.

Prior to the start of ENGR 2011, you should also learn how to upload files from MobaXterm. You can usually drag and drop files - it is fairly intuitive:

https://isip.piconepress.com/courses/temple/unvs_0822/resources/moba_filetransfer.mp4

You can also use commands like rsync as described here:

https://isip.piconepress.com/courses/temple/ece_1111/resources/tutorials/tips_mobaxterm/

I'll provide more specific directions for the ENGR 2011 students during the first lecture about where to place your files.
