I have no experience with any text editor or the process. Are we downloading the emacs software to get familiar with? Is there an online version to the software?

Everyone has ece-000 accounts now. You need to log into ece-000 using ssh for a Mac or MobaXterm for Windows, and then type isip_e. This will run emacs in a terminal window.

For Windows, if you want to install a precompiled version of emacs onto your local laptop, you can find a binary for xemacs.

For Mac users, a basic version of emacs is installed already. Open a terminal window and type "emacs".

This gives you several viable options.
