Problem Solving

Given a string, create a new string made up of its last two letters, reversed and separated by a space. For example, the word is '*bat*'. Return '*t a*'.

Function Description

Complete the function *lastLetters* in the editor below. The function must return a string of two space-separated characters.

lastLetters has the following parameter(s):

  word: a string

Constraints

- $1 \le$ length of *word* ≤ 100

▼ **Input Format for Custom Testing**

Input from stdin will be processed as follows and passed to the function.

The line contains a string *word*.

Sample Input 0

APPLE

Sample Output 0

E L

Explanation 0

The last letter in *APPLE* is *E* and the second-last letter is *L*, so we return *E L*.
