Loops

Given an array of integers, reverse the given array in place using an index and loop rather than a built-in function.

Example

$arr = [1, 3, 2, 4, 5]$

Return the array $[5, 4, 2, 3, 1]$ which is the reverse of the input array.

Function Description

Complete the function *reverseArray* in the editor below.

reverseArray has the following parameter(s):

int *arr[n]*: an array of integers

Return

int[n]: the array in reverse order

Constraints

- $1 \leq n \leq 100$
- $0 < arr[i] \leq 100$
