Problem Solving

Strings

Given a string, create a new string made up of its last two letters, reversed and separated by a space.

Example

Given the word 'bat', return 't a'.

Function Description

Complete the function *lastLetters* in the editor below.

lastLetters has the following parameter(s):

string word: a string to process

Returns:

string: a string of two space-separated characters

Constraint

- $2 \leq \text{length of } word \leq 100$

► Input Format for Custom Testing

▼ Sample Case 0

Sample Input

STDIN	Function
-----	-----
APPLE	→ word = 'APPLE'
