Here are the reviews from our paper for the Neural Engineering Conference which was accepted as a poster. Thought you might want them for your records.

| | | | |
|---|------|---|--|
| 1 | 6001 | Laudable goal that is impractical, has been attempted many times over the last few decades. | |
| 2 | 6003 | The development of a Neural Engineering Data Consortium is a compelling topic, particularly with the new federal brain mapping initiative, and should raise some interesting discussion. These ideas must be thoroughly considered, contemplated, and discussed. For that reason, it should be considered for a poster. | |
| 3 | 6005 | This work deals with an important issues in neural engineering, management, analysis, and publication of the huge data recorded from many subjects for a long time. Unfortunately, the abstract doesn't show any snapshot or example of what has been or could be done from the huge set of neural data (maybe due to the length limit), I would really like to see it at the conference. | |
| 4 | 6007 | Interesting and useful endeavour. Very commendable. | |
